Menicon Z Night lenses provide a convenient and reversible alternative to refractive surgery.

Menicon Z Night lenses reshape your cornea whilst you sleep. You remove the lenses every morning when you wake up leaving you free from lenses or spectacles during waking hours.

Who can benefit from Menicon Z Night?

- Dissatisfied soft lens wearers
- People who want to be free from spectacles and daytime lens wear
- Sports enthusiasts who do not want the restrictions associated with lens wear during activities
- People looking for an alternative to refractive surgery

How Menicon Z Night works

Who is suitable for Menicon Z Night?

Menicon Z Night is for those with near-sightedness (myopia) up to -5.00D and astigmatism up to -4.00D.
